# skybow **Add-Ins**

skybow SharePoint Add-Ins offer you a range of powerful functionalities to improve your use of SharePoint both Online and On-Premises.

SharePoint    Office 365

# How can skybow help you?

With skybow you can easily and quickly **create, manage, roll out** and **sell** business solutions, such as Contract Management, Employee Management and Quality Management. The skybow technology is based on Microsoft SharePoint and Office 365, in the place where documents and data meet.

If you are already working with SharePoint or even just thinking about it in your company, you may have come to the conclusion that it is a really extensive and complicated platform to use, and you probably wish there were a more simple way to create business apps.
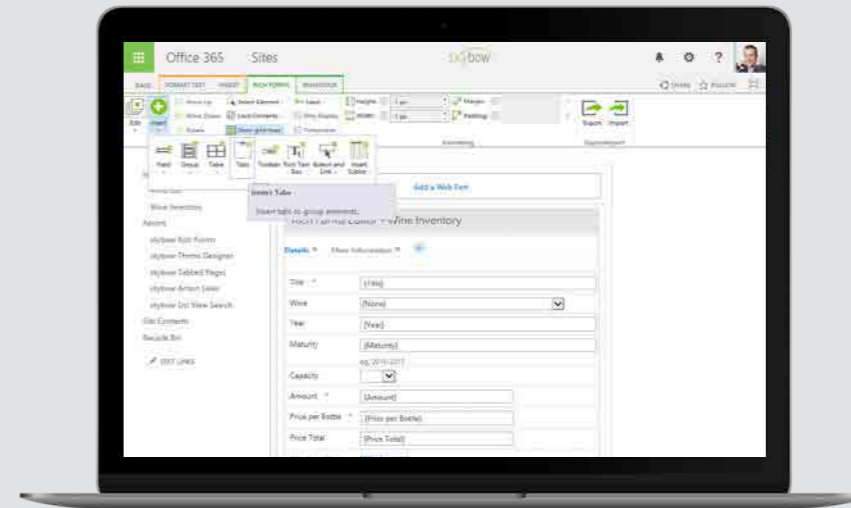

SO HOW CAN YOU CREATE **BUSINESS APPS** MORE EASILY AND QUICKLY?

By using skybow Solution Studio! Use skybow Solution Studio or one of our Add-Ins to add Business Logic to your existing solution, or to individualize and style your SharePoint user interface according to your needs.

*"Reduce your SharePoint development time by up to 85%"*

# Rich Forms...

**KEY FEATURES:**

- Deploy easily
- Place form fields freely
- Group vertically, horizontally or in tabs
- Edit sub-items in a grid (repeating tables)
- Cascading lookups
- Design forms per Content Types separately
- Handle complex business logic

*skybow Rich Forms is an Add-In for SharePoint that provides an easy-to-use, yet powerful editor to customize list forms, allowing you to easily build forms in SharePoint and Office 365 that look great and that fulfil all your business requirements.*
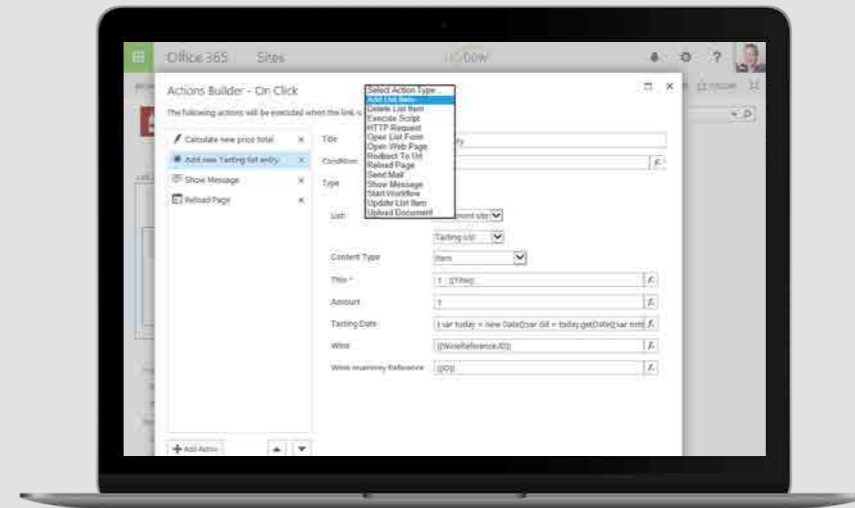

# Theme Designer...

*skybow Theme Designer offers the possibility to individualize and style the SharePoint user interface according to your needs. No programming expertise is required, and you can work comfortably in your browser.*

**KEY FEATURES:**

- Apply themes to single pages or to all pages in a site

- See the results live inside your current page – what you see is what you get

- Use the integrated demo page to style all the configurable parts in one place

- Manage all your themes comfortably from the app homepage

- Possibility to use and customize precast demo style templates
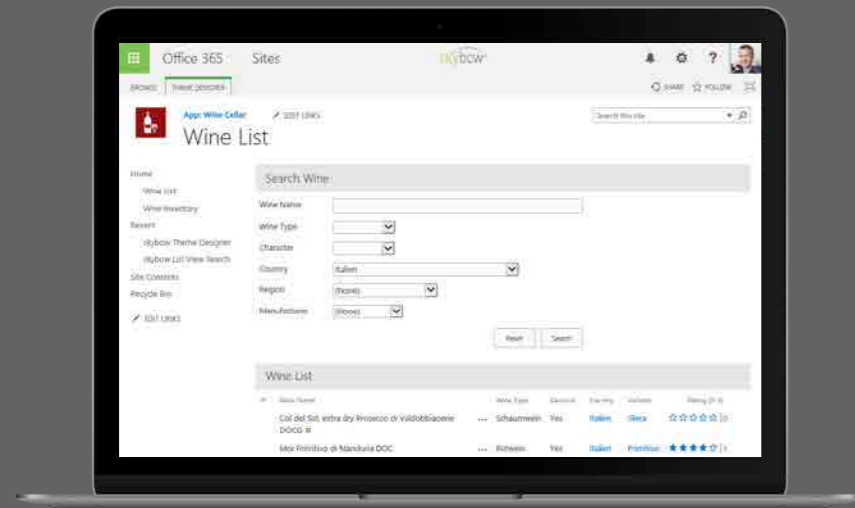

# Action Links...

*skybow Action Links enable you to easily implement even the most complex business logic into SharePoint and Office365 with a range of powerful actions.*

**KEY FEATURES:**

- Serial execution of multiple actions

- Define execution condition on each action

- Define dynamic visibility

- Drag & drop functionality for reordering action links

- Multiple action types:
  - Add, update and delete list item
  - Send emails
  - Start workflow
  - Show message
  - Execute custom scripts
  - etc.

# List View Search...

**KEY FEATURES:**

- Applicable for list views on any page, view or form
- Easy to use dropdown of available list columns for adding new filters
- Drag & drop functionality for reordering search fields
- An easy query builder to create more complex queries
- Supports all standard column types, incl. Managed Metadata

*skybow List View Search allows users to easily find and navigate through list data in SharePoint lists. It can be added to any list view to provide useful search inputs. skybow List View Search is your best answer to SharePoint's 5000 list items threshold problem.*

# Permissions Manager...

**KEY FEATURES:**

- Active Directory groups enumeration
- Empower users to manage permissions
- In-Context reporting and management
- Clean up dead accounts
- Compare/Clone permissions
- Unique permissions reporting

*skybow Permissions Manager displays users' permissions accurately, even when permissions are granted through Active Directory groups. Site Owners and Site Collection Administrators can copy, transfer, delete and grant permissions either individually or in bulk.*
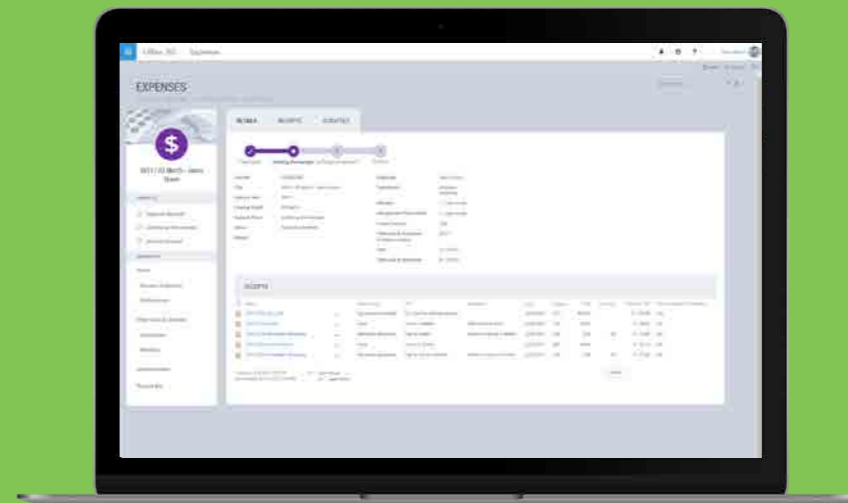

# Content Aggregator...

skybow Content Aggregator empowers SharePoint users to build aggregated data views without the need to write code, including conditional formatting, calculated columns and multiple level grouping.

**KEY FEATURES:**

- Cross Site Collection aggregation
- Save time navigating SharePoint looking for content
- Perform aggregation without affecting the performance
- You don't need Publishing to be turned on
- Content remains secure
- Functions with any list or library

# Expenses...

*"...just one example showing what you can build and resell with skybow."*

**THE SOLUTION:**

- Create expense requests
